Summery

I am a front-end developer with a specialization in React.js, next js and Tailwind CSS. I bring a proven track record of successfully implementing these technologies across a range of projects. Furthermore, my proficiency extends to the backend, where I leverage Express and MongoDB, mongoose to craft robust and efficient solutions.

SKILLS

- **Front-end technologies**
Html5, Css3, JavaScript, ES6, React js, Next js, Bootstrap, Tailwind Css, Tanstack query, Axios
- **Tools**
Firebase authentication, JWT, Stripe, Netlify, Vercel, Git and Github, Motion effect,
- **Familiar with**
Express, MongoDB, Mongoose

PROJECTS

1. **library-service-management** [View live](#) [Code-fronted-backend](#)
 - Sign up securely to access exclusive content, personalize your experience by adding favorites, and PDF reading.
 - Publishers can display their books, and users can ask for permission to publish their own works.
 - Members can effortlessly request the addition of any missing book to the library.
2. **BabyCare** [View live](#) [Code-fronted](#) [Code-backend](#)
 - Babycare website using react.js, express, MongoDB, tailwind, jwt, and some packages.
 - People can purchase and provide baby care services. If someone's added service purchase by another it will be pending then the provider can change the status.
 - For Authentication, I used Firebase and jwt for Authorization.
3. **Triptrove** [View live](#) [Code-fronted](#) [Code-backend](#)
 - Triptrove is a React.js based website and Express, MongoDB, tailwind, jwt and so more.
 - It's a multi vendor-type website where people can organize trips, and other users can purchase these trips. Each user has an individual dashboard with jwt authorization
 - A tour-type category section and each category can include more packages and trip organizers can share their stories and users can give feedback
4. **Hostflue** [View live](#) [Code-fronted](#)
 - Hostflu website using React.js, tailwind and so more.
 - This website is a domain hosting and web service related project.
 - People will be able to show all services and packages and hosting locations. User can be message via messenger
